

Pondera County

Elevation

Map 7

Elevation data were derived from Digital Elevation Models (DEMs) developed by the U.S. Geological Survey. This National Elevation Dataset was used for creation of slope maps and shaded relief maps. The U.S. Geological Survey has developed a National Elevation Dataset which is a seamless mosaic of best-available elevation data.

Spatial data (base maps) were obtained from the Montana Geographic Information Clearinghouse - Montana Natural Resource Information System (NRIS).
